

Project Initialization and Planning Phase

Date	1 July 2026
Team ID	XXXXXX
Project Name	OptiCrop – Crop Recommendation System
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

Farmers lack a data-driven system to determine the most suitable crop based on soil and weather conditions, leading to uncertainty and reduced agricultural yield. OptiCrop uses machine learning to recommend the best crop based on soil nutrients and environmental parameters, helping farmers make accurate and profitable decisions..

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A small or medium-scale farmer who depends on agriculture for livelihood.	Choose the most suitable crop to grow based on soil nutrients and environmental conditions in order to maximize yield and profit.	I do not have access to accurate data or modern tools to analyze soil conditions like Nitrogen (N), Phosphorus (P), Potassium (K), temperature, humidity, pH, and rainfall.	I rely mostly on traditional knowledge, past experience, or advice from other farmers, which may not always be accurate or data-driven.	Confused, uncertain, and worried about crop failure and low agricultural productivity.
