

Project Demo Planning

Date	1 July 2026
Team ID	XXXXXX
Project Name	OptiCrop – Crop Recommendation System
Maximum Marks	1 Mark

Project Demo Planning:

A well-structured demo plan ensures that the team presents the project effectively, covering all key aspects in a clear and organized manner. This document outlines the plan for demonstrating the project, including the flow of the demo, key features to highlight, and responsibilities of each team member.

S.No	Demo Section	Description	Duration (mins)	Responsible Member
1	Introduction	Introduce the team, project title, problem statement, and objectives of OptiCrop.	2	Team Member 1
2	Solution Overview	Explain the system architecture, machine learning model, dataset, and technologies used (Flask, Scikit-learn, HTML, CSS, Bootstrap).	3	Team Member 2
3	Live Application Demonstration	Demonstrate the deployed OptiCrop application by entering soil parameters and showing the predicted crop along with its description.	5	Team Member 3
4	Project Features	Explain the application's main features, deployment on Render, GitHub repository, and user interface.	2	Team Member 4
5	Future Enhancements	Discuss planned improvements such as weather API integration, fertilizer recommendation, multilingual support, and IoT integration.	2	Team Member 5
6	Conclusion & Questions	Summarize the project, highlight its benefits, and answer questions from the mentor or audience.	1	All Team Members

Demo Flow Summary:

Step	Activity	Notes
1	Introduction & Problem Statement	Explain the challenges farmers face in selecting suitable crops and introduce OptiCrop as a machine learning-based solution.
2	Solution Overview	Describe the Crop Recommendation Dataset, machine learning model, Flask backend, responsive frontend, and Render deployment.
3	Live Feature Demonstration	Open the deployed OptiCrop website, enter sample values for Nitrogen, Phosphorus, Potassium, Temperature, Humidity, pH, and Rainfall, then demonstrate the crop prediction and crop description.
4	Q&A Session	Answer questions related to dataset, machine learning model, prediction accuracy, deployment, future enhancements, and project implementation.
